

Testr3 Studio™

Enterprise Test Automation Software

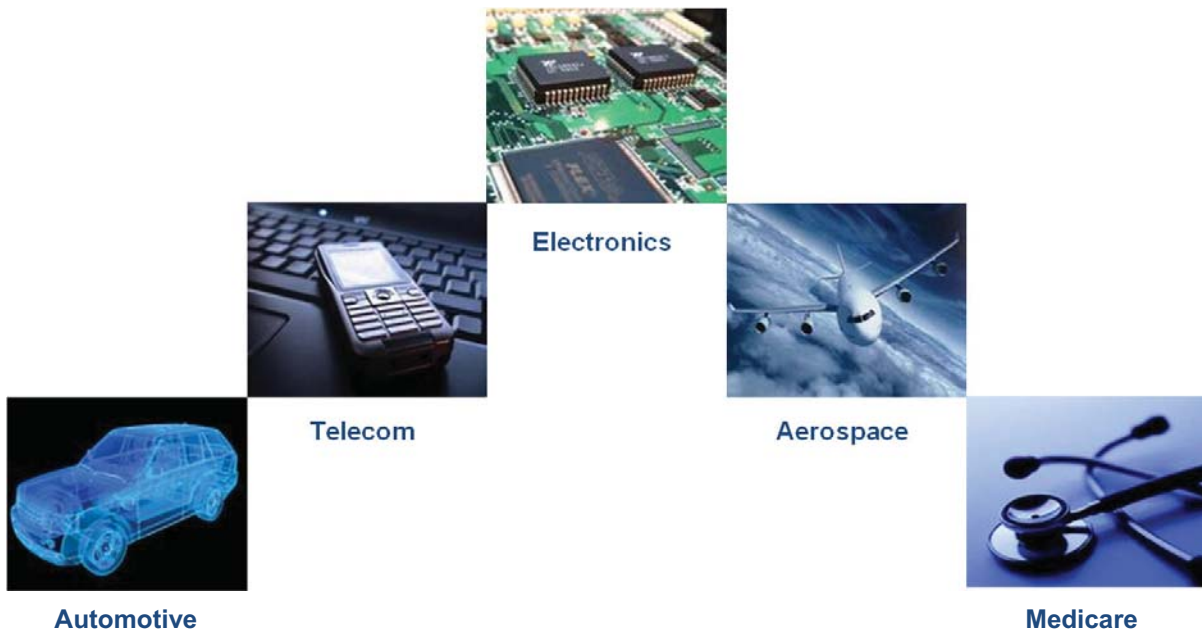

**Establish a cost-effective solution by using
Versatyle® Testr3 Studio™ to fully automate
your functional tests**

Versatyle® Testr3 Studio

Complete test automation solution with offers an advanced intelligent user interface. This platform supports a wide range of test instruments, interfaces, protocols, and script languages, for fast and efficient test automation without writing a single line of code.

Target Industries

Market Challenges vs. Versatyle Solution

In Today's Market, Companies Face Tough Challenges

Tighter Budgets, Larger Projects

While clients are demanding for more features, R&D budgets do not always align to these needs. New projects may be delayed or abandoned due to pre-established budget amounts.

Time to Market, Your Competitors

Your new product will fulfill a great market need. It will be a winner and add substantially to your top line. You are racing against time to be the first in the market so as to gain a sizable market share. Your competitors see the same opportunity; they also want to be first.

Rising Warranty and After Sales Costs

There is a fine balance between delivering quickly a new product to the market and ensuring that the quality is to the highest standards. Hidden defects can cost millions and can cause after sales support costs to grow exponentially.

Customization, Complexities Lead to Rising Consultant Fees

Custom and complex programming testing scripts may require expert help. Most often, internal resources either lack these skills or are dedicated on other high priority projects. You need to get the job done; you need to hire experienced consultants...at what cost?

Lack of Focus on Core Competencies

As markets demand lower cost, better quality, faster delivery of new products, a larger portion of your workforce is shifted to address quality, testing and after sales support. Your core competency is innovative broadband solutions...not being the best QA.

Dependency on Specialized Skills – Locked in Headcount

Your lead test engineer just resigned. He was responsible for writing complex test scripts. You need to hire and train new resources or hire consultants, possibly delaying the completion of the project. Can you eliminate the need for resource dependency?

Versatyle® Brings you to the Finish Line

Delivering Your Projects On-Time and On-Budget

Testr3 Studio frees up valuable time from your engineers, allowing them to tackle more projects within existing budget constraints. Download our Demo and see what we mean.

Faster, Better...Always Ahead

Testr3 Studio is based on codeless test design and reduces test creation and execution by over 50% as compared to other testing platforms. With Testr3 Studio, your projects hit the finish line ahead of your competition.

The Secret is in Design Validation

Codeless test cases can be rapidly developed, executed and tested. Errors are quickly flagged, allowing engineers to run through additional iterative design test cycles. The end result is producing designs with little to no errors.

Our Advanced Modules Connect the Dots

We know that you have existing complex test programs written in C++/C#, LabVIEW, MATLAB, to name a few. Our modules allow you to seamlessly import these programs into Testr3 Studio and avoid you paying high consulting fees.

Codeless Test Design Implies Simplicity

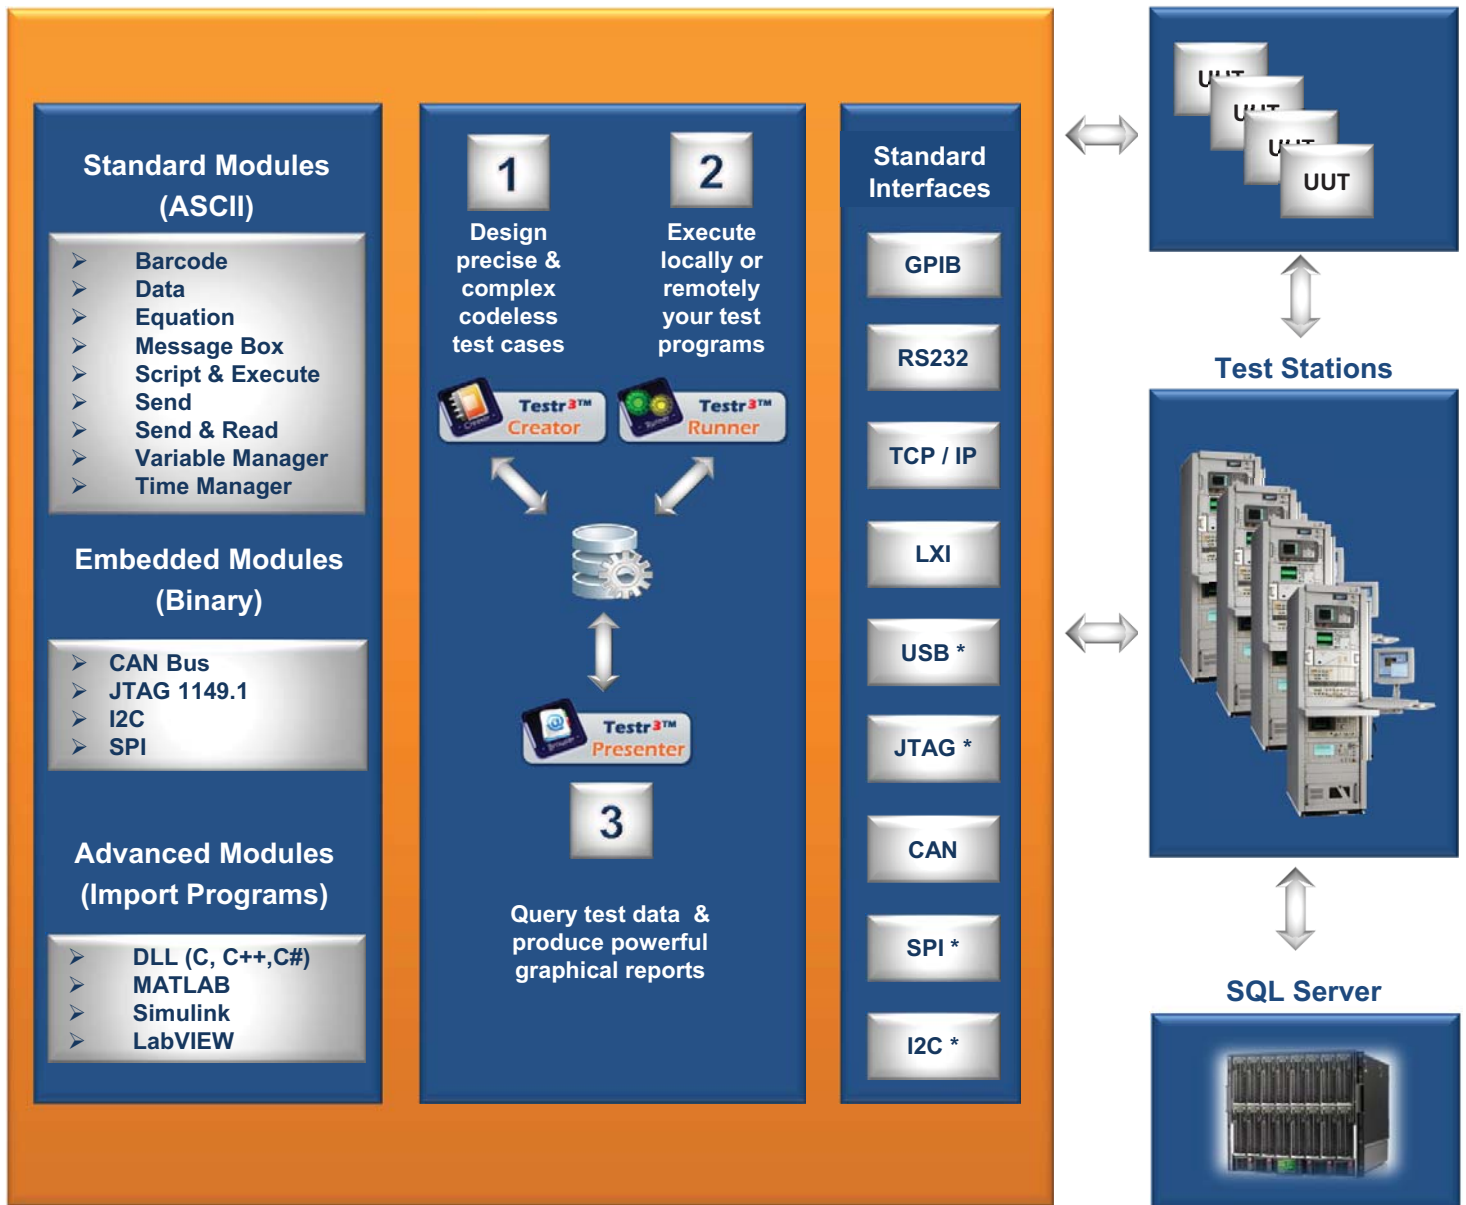

Let's face it; you don't need a PhD to use Testr3 Studio. Within days and with little training, any test engineer or technician can be up and running. You can properly allocate your existing resources where it counts – your core business.

Codeless Test Design Implies Freedom

Aside being based on codeless test design, our user friendly GUI's provide an intuitive approach to any test engineer. Highly specialized skill sets are no longer required. Dependency on specific individuals is eliminated.

Top Level Testr3 Platform Configuration

Testr3 Studio Software

* Under development

Testr3 Studio Key Functions

Mostly used by Test Engineers and Product Designers

- Create 100% codeless test cases
- Automate your testing process completely
- Import and reuse your existing test programs and scripts such as DLL, MATLAB, Simulink and LabVIEW
- Provide product version and test flow control
- Import and export test trees instantly

Mostly used by Operators and Technicians

- Run tests cases exactly how you design them
- Visualize results and report on fail status
- Manage your failure process flow
- Import and export test trees instantly
- Use simple and easy user interface

Mostly used by Management and Quality Assurance

- Generate statistical reports
- Explore your real-time test results
- Export test results to standard formats such as Excel
- Monitor your test results from a web-based application

Summary

We invest in our clients! Try our full test suit version for 60 days and if you are satisfied, purchase the Versatyle platform

- **Lower your initial capital investment and save money \$\$\$**
- **Keep control of your budget and time frame**
- **Accelerate time to market by using Testr3 Studio to automate your test cases without writing a single line of code**
- **Cut test development cost by more than 50%**
- **Eliminate dependencies to key developers and third parties**

About Versatyle Test Corporation

Versatyle Test Corporation is committed to providing the best test platforms to the electronic industry, allowing manufacturing, test & measurement and/or R&D personnel to fully achieve their objectives. Whether it is faster time to market, improved product quality or higher revenue, Versatyle helps you in achieving your goals by providing you a complete test automation life cycle. Versatyle is aware of what is required to simplify and deliver quicker test development, implementation and management. At Versatyle, we are committed to continuously enhance our products and services to address current and future requirements of the electronic testing market.
